CompTIA Cloud Essentials

About The Course

CompTIA Cloud Essentials gives business professionals a practical understanding of cloud computing and its role in today’s organizations. Rather than focusing on hands-on engineering, the course explains how cloud services work, what they cost, and how they support business strategy.

Course Objectives:

- Learners explore cloud concepts and service models, governance and compliance considerations, and how to evaluate cloud services against business needs. The course includes about 8 hours of instructional content, combining videos, hands-on activities, interactive assessments, and practice questions with instant feedback and progress reports.

Audience:

- Business analysts and project or product managers involved in cloud initiatives
- Sales, marketing, and procurement professionals working with cloud products or vendors
- Managers and decision-makers evaluating cloud adoption
- Non-technical staff who work alongside IT and cloud teams
- Anyone new to cloud computing looking for a business-oriented starting point

Prerequsites:

- The course is designed for beginners, and no prior IT or cloud experience is required. A general familiarity with business operations is helpful but not necessary.
