**Technology: Red Hat**

**Difficulty: Intermediate**

**Course Duration: 5 Days**

## **Developing Advanced Automation with Red Hat Ansible Automation Platform (DO374)**

### **About This Course:**

Developing Advanced Automation with Red Hat Ansible Automation Platform (DO374) is designed for automation content developers to leverage the new, container focused tools from Red Hat® Ansible Automation Platform to efficiently

develop automation that can be managed by the automation controller. Learn recommended practices for automation development using reusable code, advanced playbook techniques, shared execution environments, and preparing for scalable automation with the automation content navigator.

## Course Objectives:

- Leverage capabilities of the automation content navigator to develop Ansible Playbooks.
- Apply recommended practices for effective and efficient automation with Ansible.
- Use advanced features of Red Hat Ansible Automation Platform to work with data, including filters and plugins.
- Perform automation operations as rolling updates.
- Create automation execution environments to bundle and distribute the dependencies needed to run automation code.

## Audience:

- Developers
- DevOps engineers
- Linux system administrators
- Other IT professionals with basic expertise using Red Hat Ansible Automation Platform to automate, provision, configure, and deploy applications and services in a Linux environment

## Prerequisites:

- Red Hat Enterprise Linux Automation with Ansible (RH294)
- Be a Red Hat Certified Engineer (RHCE®) on Red Hat Enterprise Linux 8 or later, or demonstrate equivalent Ansible experience

## Course Outline:

Develop Playbooks with Ansible Automation Platform 2

Develop Ansible Playbooks with Red Hat Ansible Automation Platform 2 following recommended practices.

Manage Content Collections and Execution Environments

Run playbooks that use content collections not included in ansible-core, either from an existing execution environment or by downloading them from the automation hub.

Run Playbooks with Automation Controller

Explain what automation controller is and use it to run playbooks that you developed with automation content navigator.

## Work with Ansible Configuration Settings

Examine and adjust the configuration of Ansible and automation content navigator to simplify development and to troubleshoot issues.

## Manage Inventories

Manage inventories by using advanced features of Ansible.

## Manage Task Execution

Control and optimize the execution of tasks by Ansible Playbooks.

## Transform Data with Filters and Plugins

Populate, manipulate, and manage data in variables using filters and plugins.

## Coordinate Rolling Updates

Use advanced features of Ansible to manage rolling updates in order to minimize downtime and to ensure maintainability and simplicity of Ansible Playbooks.

## Create Content Collections and Execution Environments

Write your own Ansible Content Collections, publish them, embed them in a custom execution environment, and run them in playbooks by using automation controller.

## Credly Badge:

### **Display your Completion Badge And Get The Recognition You Deserve.**

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
