

Upgrading Your Skills to MCSA: Microsoft Windows Server 2016 (MS-20743)

Modality: Virtual Classroom

Duration: 5 Days

SATV Value: 5

CLC:

NATU:

SUBSCRIPTION: Master

About this course

The course is available for five days where the learners find a workable pace about implementation and configuration of Windows Server 2016 features and functionality. It is ideal to be taken by experts in the IT field who anticipate sharpening their specialized abilities from Windows 2012 Server or 2008 to Windows 2016 Server. Course takers are needed to have existing information on the previous Windows Server innovations comprehensive of a range of abilities equal to MCSA (Microsoft Certified Solutions Associate) Windows 2012 Server or 2008 certifications. However, this Microsoft 2016 Server preparing isn't a course for the upgrade of product, rather it instructs understudies to utilize their abilities and information that will assist them with working Windows Server 2016 flawlessly.

Salary Estimate:

The normal pay of a Microsoft Server Administrator is \$69,077 annually.

Course Objectives

When you have finished this course, you will have the option to:

1. Determine the storage of Windows Server 2016
2. Install and Configure Windows 2016 Server
3. Describe networking
4. Implement AD FS (Active Directory Federation Services)
5. Configure features for networking that are progressive

6. Implement services for the directory
7. Implement software-defined networking
8. Implement failover clustering
9. Execute remote access
10. Supervise and Execute the Windows containers and Hyper-V
11. Implement Hyper-V
12. Implement failover clustering with virtual machines

Targeted Audience

This training course of Microsoft is intended for the Professionals of IT who have worked in the limit of Windows 2008 or Windows 2012 framework administrator. These are learners with handy experience of the field working either the enterprise environment of Windows Server 2008 R2 or Windows Server 2008. Notwithstanding that, understudies applying to this preparation program ought to have MCSA certifications for Windows 2012 Server or proportional information.

Furthermore, any expert of IT who needs to take MCSE, later on, can truly profit by this course as it gives the perfect readiness required for the exam of MCSA.

Prerequisites

Understudies must have the accompanying before they get enlisted at this course:

1. Involvement with the execution of technologies of Windows networking.
2. At least two years of experience overseeing in deploying Windows 2008 Server or Windows 2012 Server environments.
3. Experience in the execution of Windows Server virtualization.
4. Involvement in NS in routine Windows 2008 Server and 2012 management and maintenance tasks.
5. Involvement with the execution of Active Directory advances.
6. MCSA equal certifications of Windows Server 2008 and Windows Server 2012.

Recommended prerequisites courses

- Controlling Windows Server 2012 (MS-20411)
- Configuring and Installing Windows Server 2012 (MS-20410)

Course Outline:

Module 1: Installing and configuring Windows Server 2016

This module explains how to install and perform post-installation configuration of Windows Server 2016 servers.

Lessons

- Introducing Windows Server 2016
- Installing Windows Server 2016
- Configuring Windows Server 2016
- Preparing for upgrades and migrations
- Migrating server roles and workloads
- Windows Server activation models

Lab : Installing and configuring Nano Server

- Installing Nano Server
- Completing post-installation tasks on Nano Server

After completing this course, students will be able to:

- Explain Windows Server 2016.
- Install Windows Server 2016.
- Configure Windows Server 2016.
- Prepare for upgrades and migrations.
- Migrate server roles and workloads.
- Describe the Windows Server activation models.

Module 2: Overview of storage in Windows Server 2016

This module explains how to configure storage in Windows Server 2016.

Lessons

- Overview of storage in Windows Server 2016
- Implementing Data Deduplication
- Configuring iSCSI storage
- Configuring the Storage Spaces feature in Windows Server 2016

Lab : Implementing and managing storage

- Implementing File Server Resource Manager (FSRM)
- Configuring iSCSI storage

Lab : Implementing and managing advanced storage solutions

- Configuring redundant storage spaces
- Implementing the Storage Spaces Direct feature

After completing this module, students will be able to:

- Explain storage in Windows Server 2016.
- Implement Data Deduplication.
- Configure iSCSI storage.
- Configure the Storage Spaces feature in Windows Server 2016

Module 3: Implementing directory services

This module explains how to implement the Directory Services feature.

Lessons

- Deploying Active Directory domain controllers
- Implementing service accounts
- Azure AD

Lab : Implementing and Managing AD DS

- Cloning a domain controller
- Implementing service accounts

After completing this module, students will be able to:

- Deploy AD DS domain controllers.
- Implement service accounts.
- Explain Azure AD.

Module 4: Implementing AD FS

This module explains how to implement an AD FS deployment.

Lessons

- Overview of AD FS
- Deploying AD FS
- Implementing AD FS for a single organization
- Implementing Web Application Proxy
- Implementing SSO with Microsoft Online Services

Lab : Implementing AD FS

- Installing and configuring AD FS
- Configuring an internal application for AD FS

Lab : Implementing Web Application Proxy

- Implementing Web Application Proxy

After completing this module, students will be able to:

- Describe of AD FS.
- Deploy AD FS.
- Implement AD FS for a single organization.
- Implement Web Application Proxy.
- Implement SSO with Microsoft Online Services.

Module 5: Implementing network services

This module explains how to configure advanced features for Dynamic Host Configuration Protocol (DHCP) and configure IP Address Management (IPAM).

Lessons

- Overview of networking enhancements
- Implementing IPAM
- Managing IP address spaces with IPAM

Lab : Implementing network services

- Configuring DNS policies
- Configuring DHCP failover
- Configuring IPAM

After completing this module, students will be able to:

- Describe networking enhancements.
- Implement IP address management.
- Manage IP address spaces with IPAM.

Module 6: Implementing Hyper-V

This module explains how to install and configure Hyper-V virtual machines.

Lessons

- Configuring the Hyper-V role in Windows Server 2016
- Configuring Hyper-V storage

- Configuring Hyper-V networking
- Configuring Hyper-V virtual machines

Lab : Implementing server virtualization with Hyper-V

- Installing the Hyper-V server role
- Configuring virtual networking
- Creating and configuring a virtual machine

After completing this module, students will be able to:

- Configure the Hyper-V role in Windows Server 2016.
- Configure Hyper-V storage.
- Configure Hyper-V networking.
- Configure Hyper-V virtual machines.

Module 7: Configuring advanced networking features

This module explains how to implement an advanced networking infrastructure.

Lessons

- Overview of high-performance networking features
- Configuring advanced Hyper-V networking features

Lab : Configuring advanced Hyper-V networking features

- Creating and using Microsoft Hyper-V virtual switches
- Configuring and using the advanced features of a virtual switch

After completing this module, students will be able to:

- Describe high-performance networking features.
- Configure advanced Hyper-V networking features.

Module 8: Implementing Software Defined Networking

This module explains how to implement software-defined networking.

Lessons

- Overview of SDN
- Implementing network virtualization
- Implementing Network Controller

Lab : Deploying Network Controller

- Preparing to deploy Network Controller

- Deploying Network Controller

After completing this module, students will be able to:

- Describe Software Defined Networking.
- Implement network virtualization.
- Implement Network Controller.

Module 9: Implementing remote access

This module explains how to configure connectivity for remote users by using the DirectAccess feature.

Lessons

- Remote access overview
- Implementing DirectAccess
- Implementing VPN

Lab : Implementing DirectAccess

- Configure DirectAccess using the Getting Started Wizard
- Testing DirectAccess

After completing this module, students will be able to:

- Describe common remote-access solutions and technologies.
- Implement DirectAccess.
- Implement VPNs.

Module 10: Deploying and managing Windows and Hyper-V containers

This module provides an overview of Windows Server 2016 containers. Additionally, it explains how to deploy, install, configure, and manage containers in Windows Server 2016.

Lessons

- Overview of containers in Windows Server 2016
- Preparing to deploy containers
- Installing, configuring, and managing containers by using Docker

Lab : Installing and configuring containers

- Installing Docker

After completing this module, students will be able to:

- Explain the purpose of Windows Server and Hyper-V containers.

- Deploy and manage containers.
- Install, configure, and manage containers by using Docker

Module 11: Implementing failover clustering

This module explains how to implement failover clustering to provide high availability for network services and applications.

Lessons

- Overview of failover clustering
- Implementing a failover cluster
- Configuring highly-available applications and services on a failover cluster
- Maintaining a failover cluster
- Implementing a stretch cluster

Lab : Implementing failover clustering

- Configuring iSCSI storage
- Configuring a failover cluster
- Deploying and configuring a highly available file server
- Validating the deployment of a highly available file server
- Configuring CAU on the failover cluster

After completing this module, students will be able to:

- Describe the concept of failover clustering.
- Implement a failover cluster.
- Configure highly-available applications and services on a failover cluster.
- Maintain a failover cluster.
- Implement a stretch-failover cluster.

Module 12: Implementing failover clustering with Windows Server 2016 Hyper-V

This module explains how to deploy and manage Hyper-V virtual machines in a failover cluster.

Lessons

- Overview of the integration of Hyper-V Server 2016 with failover clustering
- Implementing Hyper-V virtual machines on failover clusters
- Implementing Windows Server 2016 Hyper-V virtual machine migration
- Implementing Hyper-V Replica

Lab : Implementing failover clustering with Windows Server 2016 Hyper-V

- The Hyper-V Failover clustering testing environment
- Configuring Hyper-V Replica
- Configuring a failover cluster for Hyper-V

- Configuring a highly available virtual machine

After completing this module, students will be able to:

- Describe how Windows Server 2016 Hyper-V integrates with failover clustering.
- Implement Hyper-V virtual machines on failover clusters.
- Implement Hyper-V virtual machine migration.
- Implement Hyper-V Replica.
