Difficulty: Intermediate

Course Duration:

Certified Web Penetration Tester + CompTIA PenTest+

Certified Web Penetration Tester develops practical skills for assessing modern web application security. Building on prior cybersecurity or IT experience, learners progress from web technologies and architecture to reconnaissance, vulnerability discovery, controlled exploitation, and professional reporting. Hands-on labs use browser developer tools, Burp Suite, and testing techniques to investigate injection flaws, client-side and server-side weaknesses, HTTP issues, authentication, authorization, business logic vulnerabilities, and JWT handling. Applied assessments develop evidence collection and communication skills. The program also includes preparation for the CompTIA PenTest+ certification exam, led by an

expert instructor.
