

## **Planning and Administering Microsoft SharePoint 2016 (MS-20339-1)**

**Modality: Virtual Classroom**

**Duration: 5 Days**

**SATV Value: 5 Days**

**SUBSCRIPTION: Master, Master Plus**

### **About this course:**

The course is designed to focus on the methods and teachings to how to operate, troubleshoot and manage the SharePoint. In this course you will be provided detailed instructions and hand-on practice which will help you in handling your SharePoint.

The course is mainly targeted for the qualified IT professionals who wish to gain knowledge on how to manage, install, and operate SharePoint 2016 installations in the cloud or in a data center. This course the initial part of the two courses required for IT professional and is associated with the SharePoint 2016 IT Pro certification.

The average salary for a Microsoft SharePoint Administrator is **\$115,000** per year.

### **Course Objectives:**

The course provides training which enables candidates to:

- Plan an information structure for SharePoint 2016 operations.
- Plan a physical structure for SharePoint 2016 operations.
- Develop and manage site gathering and web applications.
- Configure consents and handlers/ employees and protect content in SharePoint 2016 operations.
- Manage farm-level protection and platform in SharePoint 2016 operations.
- Operate and manage efficiently the audience, employees and user profiles.
- Troubleshoot, validate and preserve SharePoint 2016 operations.
- Explain the essential functions of SharePoint 2016.
- Operate and handle the search practice in SharePoint 2016.
- Plan a rational construction for the SharePoint 2016 operations.

- Manage and install SharePoint 2016 completely.
- Design and handle service applications for SharePoint 2016 operations.
- Manage validation in the SharePoint 2016 deployment.
- Handle information arrangement in SharePoint site gatherings and web applications.

## **Audience:**

The course is mainly targeted for the qualified IT professionals who wish to gain knowledge on how to manage, install, and operate SharePoint 2016 installations in the cloud or in a data center.

The candidates generally have two years of experience of other core technologies dependent on SharePoint like, Windows Server 2012 R2 or (AD DA) Active Directory Domain Services, (IIS) Internet Information Services, networking infrastructure services and Microsoft SQL Server 2014. And, approximately or more one-year experience with SharePoint operating and managing.

The attendees are generally:

- Qualified with Windows PowerShell.
- Skilled with business continuity management along with data backup, easy accessibility and restoration.
- Detailed information and experience with SharePoint Online.
- It Professional who operate, design and execute a multi-server operation of SharePoint 2016.
- Possess experience or skill for solution-bases role. Professionals who has worked on finding or executing solutions in SharePoint space that involves search, document handling and content handling.
- Have vast understanding with workloads of SharePoint.
- Has Security technologies and validation practice.

## **Prerequisites:**

The candidate must be initially familiar and approximately two years of experience in SharePoint 2010, many of users do not upgrade the system from SharePoint 2010 to SharePoint 2013. Which makes it essential that the candidate to know the differences between the SharePoint 2010 and SharePoint 2013, specially in terms of hybridization. Lastly, an ideal candidate must have knowledge and experience of around 1 year in operating and managing multiple SharePoint 2013 farms in large organizations.

The candidates must have beforehand knowledge of:

- Execute demand-based security.
- SQL Server's server functions and database management.
- For authentication or as a user store or authorization, use AD DS configuration.
- Operate applications virtually, in cloud and natively.
- Operate Microsoft Hyper-V virtual technologies.
- SQL Server linking to applications.
- Managing IIS.
- Use Windows PowerShell 4.0. to manage applications remotely.
- Windows Server 2012 R2 or Windows Server 2012 Organization environment software handling.

### **Suggested prerequisites courses:**

- Core Solutions of Microsoft SharePoint Server 2013 (MS-20331)
- Advanced Solutions of Microsoft SharePoint Server 2013 (MS-20332)

### **Course Outline:**

#### **Module 1: Introducing SharePoint 2016**

This module describes the structure and capabilities of a SharePoint environment, and the major changes for IT professionals in SharePoint 2016. This module also describes the options available for deploying SharePoint 2016.

#### **Lessons**

- Key components of a SharePoint deployment
- New features in SharePoint 2016
- SharePoint 2016 deployment options

After completing this module, students will be able to:

- Identify the architecture and capabilities of SharePoint 2016.
- Identify new and deprecated features in SharePoint 2016.
- Identify deployment options for SharePoint 2016.

#### **Module 2: Designing an information architecture**

This module describes how to gather business requirements, and the key elements of a successful

information architecture project. This module also explains how to structure information within a SharePoint 2016 deployment and make it easy to find and retrieve.

## Lessons

- Identifying business requirements
- Understanding business requirements
- Organizing information in SharePoint 2016
- Planning for discoverability

## Lab : Designing an information architecture - Part one

- Identifying site columns and content types

## Lab : Creating an information architecture - Part two

- Designing a business taxonomy

After completing this module, students will be able to:

- Explain how understanding business requirements drives the design of an organizational information architecture.
- Describe the key components available in SharePoint 2016 to deploy an information architecture.
- Plan for discoverability as part of an information architecture deployment.

## Module 3: Designing a logical architecture

This module explains how to approach a logical architecture design and how to document it.

## Lessons

- Overview of the SharePoint 2016 logical architecture
- Documenting your logical architecture

## Lab : Designing a logical architecture

- Planning a logical architecture
- Producing a logical architecture diagram

After completing this module, students will be able to:

- Map business requirements to SharePoint 2016 architecture components.
- Explain the importance of documentation and describe the options for documenting the logical architecture.

## Module 4: Designing a physical architecture

This module describes the physical design requirements for SharePoint 2016, and the physical components necessary to fulfill the physical architecture design. It also explains the SharePoint farm

topologies, and describes how to map a logical architecture design to a physical architecture design.

## Lessons

- Designing physical components for SharePoint deployments
- Designing supporting components for SharePoint deployments
- SharePoint farm topologies
- Mapping a logical architecture design to a physical architecture design

## Lab : Designing a physical architecture

- Designing a physical architecture
- Developing a physical architecture design diagram

After completing this module, students will be able to:

- Describe the requirements for the physical components that are needed for a SharePoint 2016 deployment.
- Describe the requirements for the supporting components that are needed for a successful SharePoint 2016 deployment.
- Identify SharePoint farm topologies.
- Map a logical architecture design to a physical architecture design.

## Module 5: Installing and configuring SharePoint 2016

This module explains how to install SharePoint 2016 in different topologies, script the installation, and configure a SharePoint 2016 environment. This module also explains how to configure the core farm-level settings in a SharePoint 2016 deployment.

## Lessons

- Installing SharePoint 2016
- Scripting installation and configuration of SharePoint
- Configuring SharePoint 2016 farm settings

## Lab : Deploying and configuring SharePoint 2016 ? Part one

- Provisioning a SharePoint 2016 farm

## Lab : Deploying and configuring SharePoint 2016 ? Part two

- Configuring incoming email
- Configuring outgoing email
- Configuring integration with Office Online Server

After completing this module, students will be able to:

- Install SharePoint 2016.
- Deploy and configure SharePoint 2016.

- Script the installation and configuration of SharePoint 2016.
- Configure SharePoint 2016 farm settings.

## **Module 6: Creating web applications and site collections**

This module explains how to create web applications in SharePoint 2016 and how to configure these applications. It also explains how to create and configure site collections in SharePoint 2016 and SharePoint Online.

### **Lessons**

- Creating web applications
- Configuring web applications
- Creating and configuring site collections

### **Lab : Creating and configuring web applications**

- Creating a web application
- Configuring a web application

### **Lab : Creating and configuring site collections**

- Creating and configuring site collections
- Creating a site collection in a new content database
- Using Fast Site Collection Creation

After completing this module, students will be able to:

- Create web applications.
- Configure web applications.
- Create and configure site collections.

## **Module 7: Planning and configuring service applications**

This module describes the service application architecture in SharePoint 2016, and how to provision and manage service applications.

### **Lessons**

- Introduction to the service application architecture
- Creating and configuring service applications

### **Lab : Planning and configuring service applications**

- Provisioning a Managed Metadata Service application with Central Administration
- Provisioning a Managed Metadata Service application with Windows PowerShell
- Configuring the Word Automation Services service application for document conversion
- Configuring service application proxy groups

After completing this module, students will be able to:

- Explain the key components and topologies for a SharePoint 2016 service application architecture.
- Plan for service accounts and service application dependencies.
- Understand the purpose of mapping service applications to business requirements.
- Describe how to provision and manage SharePoint 2016 service applications

### **Module 8: Managing users and permissions, and securing content**

This module explains how to configure authorization in SharePoint 2016. It also explains how to configure site collection security in SharePoint 2016.

#### **Lessons**

- Configuring authorization in SharePoint 2016
- Managing access to content

#### **Lab : Managing users and groups**

- Creating a web-application policy
- Creating and managing SharePoint groups
- Creating custom permission levels

#### **Lab : Securing content in SharePoint sites**

- Managing permissions and inheritance
- Managing site-collection security
- Enabling anonymous access to a site

After completing this module, students will be able to:

- Manage users and permissions in SharePoint 2016.
- Manage access to content in SharePoint 2016.

### **Module 9: Configuring authentication for SharePoint 2016**

This module explains about the SharePoint 2016 authentication infrastructure, and how to configure claims, providers, and identity federation for SharePoint 2016. It also explains how to configure server-to-server authentication for SharePoint 2016.

#### **Lessons**

- Overview of authentication
- Configuring federated authentication
- Configuring server-to-server authentication

#### **Lab : Extend your SharePoint 2016 to support Secure Sockets Layer (SSL)**

- Configuring Microsoft SharePoint 2016 to use federated identities
- Configuring Active Directory Federation Services (AD FS) to enable a web application a relying party

- Configuring SharePoint to trust AD FS as an identity provider
- Configuring a web application to use the AD FS identity provider

After completing this module, students will be able to:

- Explain the authentication infrastructure of SharePoint 2016.
- Configure claims providers and identity federation for SharePoint 2016.
- Configure server-to-server authentication for SharePoint 2016.

### **Module 10: Securing a SharePoint 2016 deployment**

This module explains how to secure a SharePoint 2016 deployment at the platform level, and how to configure farm-level security settings for a SharePoint 2016 deployment.

#### **Lessons**

- Securing the platform
- Configuring farm-level security

#### **Lab : Securing a SharePoint 2016 deployment**

- Configuring SharePoint Server communication security
- Hardening a SharePoint server farm
- Configuring blocked file types
- Configuring Web Part security
- Implementing security auditing

After completing this module, students will be able to:

- Secure a SharePoint 2016 deployment at the platform level.
- Configure farm-level security settings for a SharePoint 2016 deployment.

### **Module 11: Managing taxonomy**

This module explains how to create and manage content types and content-type propagation. Additionally, it explains how to implement managed metadata in SharePoint web applications and site collections. It also explains how to configure the managed metadata service application in SharePoint 2016.

#### **Lessons**

- Managing content types
- Understanding managed metadata
- Configuring the managed metadata service

#### **Lab : Configuring content-type propagation**

- Creating content types for propagation
- Publishing content types across site collections

## Lab : Configuring and using the managed metadata service

- Configuring the managed metadata service
- Creating term sets and terms
- Consuming term sets

After completing this module, students will be able to:

- Create and manage content types and content-type propagation.
- Explain how to implement managed metadata in SharePoint web applications and site collections.
- Configure the managed metadata service application in SharePoint 2016.

## Module 12: Configuring user profiles

This module explains how to configure the User Profile service application, and how to manage user profiles and audiences.

### Lessons

- Configuring the User Profile Service Application
- Managing user profiles and audiences

## Lab : Configuring user profiles

- Configuring the User Profile Service Application
- Configuring directory import and synchronization

## Lab : Configuring My Sites and audiences

- Configuring My Sites
- Configuring audiences

After completing this module, students will be able to:

- Configure the User Profile service application.
- Manage user profiles and audiences.

## Module 13: Configuring Enterprise Search

This module describes the Search Service Application and explains how to configure the Search service in SharePoint 2016. It also explains how to manage the search experience in SharePoint 2016.

### Lessons

- Understanding the Search Service Application architecture
- Configuring Enterprise Search
- Managing Enterprise Search

## **Lab : Configuring Enterprise Search**

- Configuring the Search Service Application
- Configuring a file share content source
- Configuring a local SharePoint content source
- Creating a search center

## **Lab : Optimizing the search experience**

- Configuring a result source and a query rule
- Customizing the search experience
- Creating and deploying a thesaurus
- Configuring entity extractors and refiners
- Managing query spelling correction

After completing this module, students will be able to:

- Describe the Search service architecture in SharePoint 2016.
- Configure the Search service in SharePoint 2016.
- Manage the search experience in SharePoint 2016.

## **Module 14: Monitoring and maintaining a SharePoint 2016 environment**

This module explains how to implement a monitoring plan for SharePoint 2016, and how to optimize the performance of a SharePoint 2016 deployment. It also explains how to plan for and configure SharePoint caching. Further, it explains how to identify and resolve problems in a SharePoint 2016 environment.

### **Lessons**

- Monitoring a SharePoint 2016 environment
- Tuning and optimizing a SharePoint 2016 environment
- Planning and configuring caching
- Troubleshooting a SharePoint 2016 environment

## **Lab : Monitoring a SharePoint 2016 deployment**

- Configuring usage and health data collection
- Configuring Sharepoint diagnostic logging
- Configuring Health Analyzer rules
- Reviewing usage and health data

## **Lab : Investigating page load times**

- Analyzing network traffic
- Analyzing SharePoint page performance

After completing this module, students will be able to:

- Develop and implement a monitoring plan for a SharePoint 2016 environment.
- Tune and optimize a SharePoint 2016 server farm on an ongoing basis.
- Plan and configure caching to improve the performance of a SharePoint 2016 deployment.
- Troubleshoot errors and other issues in a SharePoint 2016 deployment
