## **Information Systems Certification and Accreditation Professional**

## About this course:

This training series covers everything you need to know about becoming an Information Systems Certification and Accreditation Professional. Students will learn about the risk management framework, software development life cycle, categorizing information systems, selecting security controls, implementing security controls, assessing security controls, authorizing information systems, and monitoring security controls.

This certification verifies that you have the skills needed for the practice of certifying, reviewing and accrediting the security of information systems. Individuals who are responsible for creating and implementing the processes used to evaluate risk and institute security baselines and requirements are likely to gain the most from this certification. This will be essential in making sure that the security of the information systems outweighs the potential risks to an organization from any threats. This certification is designed to provide complete guide to establishing a certified and accredited information system in any organization.

The average salary for a Security Consultants, Security Auditors, and System Administrators is **\$72,762** per year.
