Certified Disaster Recovery Engineer

About this course:

This cyber security certification training series covers everything you need to know about becoming a certified disaster recovery engineer. Students will learn about business impact analysis, risk analysis, BDP strategies, IT recovery strategies, implementation phase, testing and exercise, maintenance and updating, execution phase, cyber attacks, and pandemics.

Being a Certified Disaster Recovery Engineer (CDRE) validates that you are prepared to work with businesses to create and implement disaster recovery and business continuity plans. Those who are certified will be working, as a professional, with a business to prepare processes, policies and procedures to follow in the event of a disruption. You are important to keep a businesses' critical operations running, which today heavily relies on its IT infrastructure.

The average salary for an IT Professional is **\$85,460** per year.
