

Learn PHP Programming From Scratch

Modality: Self-Paced Learning

Duration: 51 Hours

SATV Value:

CLC:

NATU:

SUBSCRIPTION: Learn, Master

PHP is an open and free scripting language for building interactive websites and interacting with servers. PHP is currently used on more than Twenty million websites globally and more than One million servers.

For anyone new to the server-side / back-end, PHP is the best and simplest language. To a skilled programmer, it provides many functionalities. PHP's beauty is that the code is run on the server-side, and the resulting created HTML is what is seen at the front end. This means the client is never going to learn the compiled code. Although though the architecture of PHP is based on server-side scripting, there is much you can do with it.

This online training will present everything from fundamentals to advancing PHP programming utilizing real-world examples and sample projects. Rediff, Yahoo, Zynga, and Facebook all use PHP to deliver the best user experience possible.

The PHP Developer can earn an average salary of \$61,905 per annum.
