

10 Apps in 10 Weeks

Modality: On Demand

Duration: 2 Hours

About this course

This is a very useful course to learn about building apps in a quick span of time. In this course, you will be taught on how to develop apps every week. Every app that will be constructed will have a unique look and during the development, you will get to learn a unique and crucial skill every time. These skills are something that are actually used frequently by the professional app developers. Construction of each app will involve features like full source code, a step-by-step building guide, and any required video, music and graphic resources.

Requirements

The only thing required is that you should be having a fundamental knowledge of HTML and JavaScript.
