

Administering System Center Configuration Manager (MS-20703-1)

Modality: Virtual Classroom

Duration: 5 Days

SATV Value: 5

CLC:

NATU:

SUBSCRIPTION: Master

About this course

This IT Ops training course will help explain the attendees' skills and knowledge for utilizing Configuration Manager and its related site systems to successfully control network properties. The course enables the user to create management reports and problems, handle compliance and upgrade system center endpoint protection. It also includes learning of daily tasks for handling client health, operating system operations, handle applications, software updates and hardware and software inventory by operating Configuration Manager. The IT Ops training will help in preparing students for Microsoft Exam 70-703: Administering Microsoft System Center Configuration Manager and Cloud Services Integration. SCCM 2012 (Microsoft System Center Configuration Manager) is a segment of Microsoft System Center 2012 systems management suite. This windows product allows the handles or supervisors to handle the operation, arrangement and protection of applications and technologies across an organization.

The average salary for Enterprise Desktop Administrators is **\$76,899** per year.

Course Objective

After completing this course, students will be able to:

- Use configuration Manager to configure an operating system operation strategy.
- For managed PCs execute Endpoint Security.
- For managed systems and consumers operate, look over and distribute applications.
- Use software metering and Asset Intelligence.
- Software and hardware inventory management, supervision and configuration.
- Design management structure along with boundary groups, incorporating mobile-device management with Microsoft Exchange Server, resource discovery and configuring boundaries.
- Explain the functions of Configuration Manager and Intune.

- Understand its function usage to handle PCs and mobile devices in an organization's atmosphere.
- Configuration Manager site handling and sustaining.
- Sustain software updates for PCs that Configuration Manager manages.
- Handle and operate the Configuration Manager client.
- Use queries and reports to examine data.
- Handle baselines, configuration elements, and profiles to get hold of and operate compliance settings and data access for technologies and users.
- Acknowledge and operate suitable procedure to distribute and handle content required for deployments.

Audience

The course is designed for the EDAs (Enterprise Desktop Administrators).

Prerequisites

The students are required to have understanding of the following concepts and technologies:

- Basics and properties of Active Directory Domain Services (AD DS) Management.
- General idea of PKI (Public Key Infrastructure) protection.
- General knowledge of Windows Server services and roles.
- General knowledge of the configuration choices for Android, Windows Mobile device platform and iOS.
- Basic network protocols, switching, media, routing, addressing, hardware, infrastructure and networking properties.
- Windows-controlled personal computers installation, troubleshoot and operations.
- Windows PowerShell syntax and scripting knowledge and skills.

Suggested prerequisites courses

- Installing and Configuring Windows 10 (MS-20698)
- Administering Windows Server 2012 (MS-20411)

Course Outline:

Module 1: Managing computers and mobile devices in the enterprise

This module describes the features of Configuration Manager that you can use to perform complex management tasks, including the following tasks: ? Hardware and software inventory. ? Application management. ? Operating system deployment. ? Settings management. ? Software update management. ? Remote client troubleshooting. ? Protection from malware.

Lessons

- Overview of systems management by using enterprise management solutions
- Overview of the Configuration Manager architecture
- Overview of the Configuration Manager administrative tools
- Tools for monitoring and troubleshooting a Configuration Manager site

Lab : Exploring the Configuration Manager tools

- Searching in the Configuration Manager console
- Using Windows PowerShell with Configuration Manager
- Using Configuration Manager Service Manager to manage components
- Monitoring site and component status
- Reviewing log files by using the Configuration Manager Trace tool
- Explain how to use Configuration Manager to address the challenges of managing systems and users in today?s enterprise.
- Describe the Configuration Manager architecture.
- Describe the management tools that you use to perform administrative functions for Configuration Manager.
- Describe the tools that you use to monitor and troubleshoot a Configuration Manager site.

Module 2: Analyzing data using queries and reports

The Microsoft System Center Configuration Manager database stores a large amount of data about the resources in your environment. You might not always want to perform all management tasks on all resources simultaneously. Therefore, to help you locate devices or user objects in your environment that meet specific criteria, you can create queries. You then can use these queries to create collections or to find additional information about specific resources. This module describes queries and methods of creating and running them. In addition to queries, you can run reports to view various types of information related to your Configuration Manager environment. To run Configuration Manager reports, you must install and configure a reporting services point, which this module details.

Lessons

- Introduction to queries
- Configuring Microsoft SQL Server Reporting Services (SSRS)

Lab : Creating and running queriesConfiguring boundaries and resource discovery

- Creating data queries
- Creating subselect queries
- Creating status message queries

Lab : Configuring SSRS

- Configuring a reporting services point
- Creating a report by using Report Builder
- Create and configure data and status message queries.
- Configure and manage SSRS and the reporting services point.

Module 3: Preparing the management infrastructure to support PCs and mobile devices

This module explains how to prepare the management infrastructure, including configuring boundaries, boundary groups, and resource discovery. Additionally, it describes how Configuration Manager interacts with the Microsoft Exchange Server environment to discover and manage mobile devices.

Lessons

- Configuring site boundaries and boundary groups
- Configuring resource discovery
- Configuring the Exchange Server Connector for mobile device management
- Configuring user and device collections

Lab : Configuring boundaries and resource discovery

- Configuring boundaries, boundary groups, and fallback relationships
- Configuring Active Directory discovery methods

Lab : Configuring user and device collections

- Creating a device collection
- Creating a user collection
- Configuring a maintenance window
- Configure boundaries and boundary groups.
- Configure resource discovery.
- Configure the Exchange Server connector mobile device management.
- Organize resources using device and user collections.

Module 4: Deploying and managing clients

This module explains the supported operating systems and devices, the software requirements, and the different methods for installing the Configuration Manager client. This module also describes some of the default and custom client settings that you can configure. After installing the client software, you can configure the client settings to perform routine management tasks.

Lessons

- Overview of the Configuration Manager client
- Deploying the Configuration Manager client
- Configuring and monitoring client status
- Managing client settings in Configuration Manager

Lab : Deploying the Microsoft System Center Configuration Manager client software

- Preparing the site for client installation
- Deploying the Configuration Manager client software by using client push installation

Lab : Configuring and monitoring client status

- Configuring and monitoring client health status

Lab : Managing client settings

- Configuring client settings
- Describe the requirements and considerations for installing the Configuration Manager client software.
- Deploy the Configuration Manager client software.
- Configure and monitor client status.
- Manage Configuration Manager client settings.

Module 5: Managing inventory for PCs and applications

This module provides an overview of inventory collection, and explains how you can manage the information collected. You also will learn about the process of collecting hardware and software inventory, initiating inventory cycles, and initiating and securing inventory collection. This module also covers the use of software metering to monitor program usage, and the configuration and management of Asset Intelligence.

Lessons

- Overview of inventory collection
- Configuring hardware and software inventory
- Managing inventory collection
- Configuring software metering
- Configuring and managing Asset Intelligence

Lab : Configuring and managing inventory collection

- Configuring and managing hardware inventory

Lab : Configuring software metering

- Configuring software metering

Lab : Configuring and managing Asset Intelligence

- Preparing the site for Asset Intelligence
- Configuring Asset Intelligence
- Monitoring license agreements by using Asset Intelligence
- Viewing Asset Intelligence reports
- Describe inventory collection.
- Configure and collect hardware and software inventory.
- Manage inventory collection.
- Configure software metering.
- Configure Asset Intelligence.

Module 6: Distributing and managing content used for deployments

Configuration Manager clients obtain content, such as packages, applications, software updates, and even operating system images, from distribution points. Configuration Manager relies on the distribution point infrastructure to provide content management functionality. In this module, you will review the content management features, configure distribution points, and learn how to distribute and monitor content. You also will perform content validation and content prestaging.

Lessons

- Preparing the infrastructure for content management
- Distributing and managing content on distribution points

Lab : Distributing and managing content for deployments

- Installing a new distribution point
- Managing content distribution
- Prepare the infrastructure for content management.
- Distribute and manage content on distribution points.

Module 7: Deploying and managing applications

In this module, you will learn about the methods for creating, deploying, and managing applications with Configuration Manager. You also will learn to use the Software Center and the Application Catalog to install available applications. You will learn about managing deployments on unconventional applications. In addition, you will learn to install Windows 10 apps and virtualized applications.

Lessons

- Overview of application management
- Creating applications
- Deploying applications
- Managing applications
- Deploying virtual applications by using System Center Configuration Manager (Optional)
- Deploying and managing Windows Store apps

Lab : Creating and deploying applications

- Installing and configuring the Application Catalog roles
- Creating applications with requirements
- Deploying applications

Lab : Managing application supersedence and removal

- Managing application supersedence
- Uninstalling the Excel Viewer application

Lab : Deploying virtual applications by using Configuration Manager (Optional)

- Configuring support for App-V
- Deploying virtual applications

Lab : Using Configuration Manager to deploy Windows Store apps

- Configuring support for sideloading Windows Store apps
- Configuring a Windows Store app
- Deploying Windows 10 apps to users
- Describe the application management features of Configuration Manager.
- Create applications.
- Deploy applications.
- Manage applications.
- Configure and deploy virtual applications.
- Configure and deploy Windows Store apps.

Module 8: Maintaining software updates for managed PCs

This module explains how to use the software updates feature in Configuration Manager to implement an end-to-end management process for the complex task of identifying, deploying, and monitoring software updates to your Configuration Manager clients.

Lessons

- The software updates process
- Preparing a Configuration Manager site for software updates
- Managing software updates
- Configuring automatic deployment rules
- Monitoring and troubleshooting software updates

Lab : Configuring the site for software updates

- Configuring and synchronizing the software update point

Lab : Deploying and managing software updates

- Determining software update compliance
- Deploying software updates to clients

- Configuring automatic deployment rules
- Describe how the software updates feature integrates with Configuration Manager.
- Prepare the Configuration Manager site for software updates.
- Manage the evaluation and deployment of software updates.
- Configure automatic deployment rules.
- Monitor and troubleshoot software updates.

Module 9: Implementing Endpoint Protection for managed PCs

Configuration Manager provides a number of security-related features that you can use to help protect client computers from malware threats, and to configure specific Windows Firewall settings for clients. Based on System Center Endpoint Protection (Endpoint Protection) functionality, Endpoint Protection in Configuration Manager supports the deployment, management, and monitoring of antimalware policies and Windows Firewall settings on client computers. This module explains how to use configure Endpoint Protection Configuration Manager to implement Endpoint Protection and deploy and monitor Endpoint Protection policies.

Lessons

- Overview of Endpoint Protection in Configuration Manager
- Configuring, deploying, and monitoring Endpoint Protection policies

Lab : Implementing Microsoft System Center Endpoint Protection

- Configuring the System Center Endpoint Protection point and client settings
- Configuring and deploying Endpoint Protection policies
- Monitoring Endpoint Protection
- Configure Endpoint Protection to detect and remediate malware and security vulnerabilities.
- Configure, deploy, and manage Endpoint Protection policies.

Module 10: Managing compliance and secure data access

Many enterprise organizations require systems, such as servers, laptops, desktop computers, and mobile devices, to meet specific configuration and compliance requirements. Compliance settings in Configuration Manager can play a key role in identifying existing configurations, discovering systems that have adverse configuration changes, and remediating these settings automatically when necessary. Compliance settings also can help control how users manage and access data in the enterprise network environment. For computers that run Windows 8 and newer operating systems, you can manage data using folder redirection, offline files, and roaming profiles. You also can control access to data using remote connection profiles, virtual private network (VPN) profiles, Wi-Fi profiles, and certificate profiles. This module describes the compliance settings that you can manage using Configuration Manager. You will learn to use these settings to maintain configuration requirements and to provide secure data access to enterprise resources.

Lessons

- Overview of Compliance Settings
- Configuring compliance settings

- Viewing compliance results
- Managing resource and data access

Lab : Managing compliance settings

- Managing configuration items and baselines
- Viewing compliance settings and reports
- Configuring remediation in compliance settings
- Using compliance information to create collections
- Describe compliance settings features.
- Configure compliance settings.
- View compliance results.
- Manage resource and data access.

Module 11: Managing operating system deployment

You can use the operating system deployment feature in Configuration Manager to create operating system images that you can deploy to unmanaged computers and those managed by Configuration Manager. There are several scenarios in which you can deploy operating systems by using Configuration Manager, including when you are working with new systems or when you are upgrading existing ones. Operating system deployment uses both Configuration Manager and Windows components to manage and deliver operating system images. You can configure settings on a reference computer prior to capturing an image of its operating system or by using task sequences that Configuration Manager creates after you deploy the image to a target system. This module explains how to use Configuration Manager to create a strategy for operating-system deployments. And also, it explains how to manage Windows as a service.

Lessons

- An overview of operating system deployment
- Preparing a site for operating system deployment
- Deploying an operating system
- Managing Windows as a service

Lab : Preparing the site for operating system deployment

- Managing the site system roles used to support operating system deployment
- Managing packages to support operating system deployment

Lab : Deploying operating system images for bare-metal installations

- Preparing the operating system image
- Creating a task sequence to deploy an image
- Deploying an image
- Describe the terminology, components, and scenarios used to deploy operating systems by using Configuration Manager.
- Describe how to prepare a site for operating system deployment.
- Describe the process used to deploy an operating system image.

Module 12: Managing and maintaining a Configuration Manager site

This module explains how to use manage and maintain a Configuration Manager site. It describes role-based administration, Remote Tools, and the site maintenance tasks that you can manage by using Configuration Manager. Additionally, it explains how to back up and recover a Configuration Manager site system.

Lessons

- Configuring role-based administration
- Configuring Remote Tools
- Overview of Configuration Manager site maintenance
- Backing up and recovering a Configuration Manager site

Lab : Configuring role-based administration

- Configuring a new scope for Toronto administrators
- Configuring a new administrative user

Lab : Configuring Remote Tools

- Configuring the Remote Tools client settings and permissions
- Managing desktops by using Remote Control

Lab : Maintaining a Configuration Manager site

- Configuring maintenance tasks in Configuration Manager
- Configuring the Backup Site Server task
- Recovering a site from a backup
- Configure role-based administration.
- Configure Remote Tools to support client activity.
- Identify Configuration Manager site Maintenance tasks.
- Back up and recover a Configuration Manager site.
