

From 0 to 1: Hive for Processing Big Data

Modality: Self-Paced Learning

Duration: 15 Hours

SATV Value:

CLC:

NATU:

SUBSCRIPTION: Learn, Master

About this course:

This course is taught by an incredible team, which consists of two Stanford graduates, a former Google employee, and two former Flipkart Lead Analysts. This team has decades of formal experience both individually and together.

Hive is based off on SQL but it comes with a modern twist. This course will walk you through the complete process of using Hive for the processing of Big Data.

Hive combines the wonders of Distributed Computing and Analytical processing using Hadoop on one single platform. However, even though HiveQL is a fairly new technology it is very much like SQL. Also, many operations are pretty similar as well. This course will help you bridge the gaps between the two.

This course provides a comprehensive end to end guide on using Hive. Both Analysts who work on data or Engineers who want to customize functions for optimal performance can leverage the course and use it to their needs.

Also, each topic in this course has real-time examples included in them.

Audience:

With this course, we target the following audience:

- Data Analysts who are responsible for complex analytical queries on massive amounts of data
- Engineers who want to gain an idea about Hive as a data warehouse solution

Course Objective:

- For Data Analysts: Joins, View, Explode, Table Generating Functions, Sub-queries, Windowing, Lateral View, and other basics.
- For Hive Engineers: Bucketing, Map Side Joins, User-defined functions using Java, UDF and UDAF (GenericUDF and GenericUDFT), Partitioning, Map-Reduce including Select, Join, and Group, and much more

- For SQL Beginners: SQL in all its glory

Prerequisites:

Students must have some basic concepts of SQL, however, it is completely fine if you don't know it yet. This course comes with a SQL primer at the end, refer to it before taking the course.

Other than that, all candidates shall have some basic Java understanding, however, it is not compulsory.

Course Outline:

- You, Us & This Course
- Introducing Hive
- Hadoop and Hive Install
- Hadoop and HDFS Overview
- Hive Basics
- Built-in Functions
- Sub-Queries
- Partitioning
- Bucketing
- Windowing
- Understanding MapReduce
- MapReduce logic for queries: Behind the scenes
- Join Optimizations in Hive
- Custom Functions in Python
- Custom functions in Java
- SQL Primer - Select Statemets
- SQL Primer - Group By, Order By and Having
- SQL Primer - Joins
- Appendix
