

# **Manage Office 365 Identities**

**Modality: On Demand**

**Duration: 24 Hours**

About this course:

Through this online training program, at Office 365, you'll discover how to manage and set up groups and users, known as identities. You can discover the various identity forms available in Office 365 to build and customize, and the advantages of using each of them. For example, Office 365 enables you to synchronize your local AD users with the cloud, so you only need to handle your users in one location, and the adjustments are automatically transferred to the cloud. You'll also discover the consequences for certain users by using a different identity form and how to handle the passwords. Office 365 provides a rich collection of identity protection features to safeguard your files.

**Course Objective:**

- Use Azure Active Directory Connect to plan and implement identity synchronization
- Manage licenses, security groups and users for cloud identities in Office-365
- Plan and implement federated identities with ADFS

**Audience:**

- MS Office 365 users

**Prerequisites:**

- Familiarity with MS SQL, MS SharePoint, and PowerShell will be beneficial

**Course Outline:**

## **1 | Manage user, security groups and licenses for cloud identities**

- User accounts and licenses in Office 365
- Admin roles and security groups in Office 365
- Password management in Office 365
- Module Assessment

## **2 | Plan and implement identity synchronization**

- Introduction to identity synchronization
- Planning for Azure AD Connect
- Implementing Azure AD Connect

- Managing synchronized identities
- Module Assessment

### **3 | Planning and implementing federated identities**

- Introduction to federated identities
- Planning an AD FS deployment
- Implementing AD FS
- Module Assessment

#### **Launch Lab**

- Launch Lab

#### **Final Exam**

- Final Exam?
