About this Course:

Being proficient at Scrum methodology and Agile framework can easily set you apart from all other candidates while applying for any job. An average Agile Scrum certified professional gets paid around **\$90,000** per annum which is a good living wage in view of the current economic background. Nevertheless, the person must be exceptionally good at their job rather than just having a very introductory level knowledge of the said software. This course trains you in achieving that much sought after skill set and guarantees that you are familiar with the concepts and skills of the Scrum methodologies as well as the Agile framework.

This course is designed to help you prepare for the EXIN Agile Scrum Master certification exam which validates the skills and knowledge of professionals regarding the Scrum methodologies and Agile framework.

Course Objective:

Upon completion of this course, the participant should have an advanced skill set and a sound working knowledge of the following principals while also be able to;

- Learn the Scrum Master role
- Gain an understanding of Agile estimates, monitoring, planning, and control
- Learn how to Adopt Agile in an organization
- Learn the concepts of Agile planning, estimates, control and monitoring
- Prepare for the exam of Agile Scrum Master certification
- Learn how to handle complex projects

This course is spread over a period of three days and helps participants prepare for the Agile Scrum Master certification exam. Along with helping participants prepare for the said exam via the provision of a wide-ranging question bank, this course also includes multiple assessments and practical assessments which have to be submitted during the length of the course. This course also has a sharp focus on a hands-on interactive approach while teaching the course material.

Audience:

This particular course is aimed at the following audience;

- Those who are working in the field of business management
- Those who are working in the field of IT Services
- Those who are working in the field of software development
- Those who are working in the field of project management or those in a specific project management team assigned with the task of carrying out functions related to project management within and across organizations.
- All the individuals listed above are not the only ones eligible to take this course. Anyone with an aspiration to learn the course material may attend the course. The candidates are allowed to earn however many intermediate level certifications they desire.

Prerequisites:

There are no prerequisites which are absolutely necessary to be eligible to take this course. However, participants are encouraged to submit the assigned tasks during the length of the course if they wish to receive a Master certification at the end of the course.

However, those who wish to access the course material purely from a learning point of view with no wish to receive a certification are also welcome to attend the course and there is no restriction for them with regards to the submission of the assignments.
