

Modern Desktop Administrator: Managing Modern Desktops (MD-101)

Modality: Virtual Classroom

Duration: 5 Days

SATV Value: 5

CLC:

NATU:

SUBSCRIPTION: Master

You will obtain a Free Official Exam Voucher (apart from purchases utilizing SATV / Training Vouchers) for the MD-101 Certification if you register in this course without the Master Subscription Plan. If you are enrolled in the Master Subscription, this course doesn't provide an Exam Voucher but you could apply to obtain the Official Exam Voucher individually.

About this course:

When desktops have changed, so approaches to deploy and upgrade them have evolved. Throughout this program, students will discover techniques to prepare and execute a delivery strategy for an OS. Current organizations demand that the Desktop Admin be able to handle and operate computers, phones, and tablets, either owned by the employee or owned by the company. This program will assist you to learn the different techniques available, the situations for which they are suitable and how to implement Windows utilizing current methods. This program will also incorporate implementing and planning an upgrade tactics for Windows.

As need for companies to make it possible for the workforce to be more mobile, the role of a desktop administrator is really not just about desktop management any more. With Bring your own device becoming common and the requirement for workers to obtain line of enterprise applications on personal devices, both mobile and desktop devices should be incorporated in the scope of desktop administration irrespective of ownership. Throughout this program students will learn the main features of co-management strategies and modern management.

Students will examine what it requires for MS Intune to be integrated into your company and how it can be used to handle modern devices and desktops. You will also study about techniques for managing and deploying applications and browser-based apps.

Daily, many companies are requesting for information technology to assist worker mobility. Present environments allow that the Desktop Admin be able to support and handle computers, tablets, and phones, be they owned by the employee personally or by the organization. At same period, IT still wants to be able to secure the data accessed by those apps. The participant will be guided to the core security principles in modern management in this course. This course teaches access, identities, and authentication, and also how these categories can be protected the participant will be guided to the Azure Active Directory and will understand techniques to utilize MS Intune in enforcement policies to secure devices and data. Additionally, this program will discuss main Azure Information Security and Advanced Threat Protection features for Windows Defender, and how to apply these

technologies.

The System Administrator can earn an average salary of \$65,000 per annum.

Course Objective:

After this training has been finished, students are expected to:

- Understand for which on-premise situations cloud-based solutions can be utilize
- Intune configuration
- Establish an OS implement and update strategy
- Configure and plan Windows update policies
- Handle and implement applications, including Internet and Office 365 ProPlus
- Handle folder redirection and user profiles
- Explain the capabilities and benefits of Azure Active Directory
- Deployment of Windows Hello for Business
- Explain the different tools utilize to protect data and devices
- Grasp the various techniques of deployment
- Migrate and implement desktops to Windows 10
- Grasp the methods and benefits of co-management strategies
- Configure device policies and enroll devices in Intune
- Design a mobile app management tactics
- Explorer settings
- Use Azure Active Directory and AD DS to manage users
- Establish conditional accessibility regulation on the basis of compliance policies
- Advanced Threat Protection by implementing Windows Defender

Audience:

In an enterprise environment the Modern Desktop Manager configure, manage, deploy, monitor, and secure client apps and devices. Obligations involve managing access, updates, apps, identity, and policies. The M365 Enterprise Administrator and the MDA work together to develop and implement a device strategy that satisfies the business requirements of a modern enterprise.

Prerequisite:

The MDA must be experienced with M365 workloads, and seem to have good installation, setup, and maintenance skills for Windows 10 and non-Windows devices. The position of the Modern Desktop Administrator focuses on the management of cloud services rather than on-premises technology.

Course Outline:

MD-101T01-A: Deploying the Modern Desktop

Module 1: Planning an Operating System Deployment Strategy

This module explains how to plan and implement a deployment strategy. It covers various methods and scenarios for deploying Windows. It discusses on-premise and cloud technologies as well as considerations for new deployments, upgrading, and migrations.

Lessons

- Overview of Windows as a service
- Windows 10 Deployment options
- Considerations for Windows 10 deployment

Lab : Practice Lab - Planning Windows 10 deployment

After completing this module, students will be able to:

- Describe Windows as a Service.
- Describe the different methods for deployment.
- Understand the differences between on-premise and cloud-based solutions.
- Describe methods of dynamic provisioning.
- Describe the different tools available in the Windows Assessment and Deployment Kit.
- Describe the scenarios and limitations for in-place upgrades and migrations.

Module 2: Implementing Windows 10

This module covers new modern methods for deploying Windows 10 such as Windows Autopilot and provisioning packages. This module also covers tool used in upgrade planning, application compatibility and migration methods.

Lessons

- Implementing Windows 10 by using dynamic deployment
- Implementing Windows 10 by using Windows Autopilot
- Upgrading devices to Windows 10

Lab : Practice Lab - Implementing Windows 10

- Creating and deploying provisioning package
- Migrating user settings
- Deploying Windows 10 with AutoPilot

After completing this course, learners should be able to:

- Develop an Operating System deployment and upgrade strategy
- Understand the different methods of deployment.
- Understand which scenarios on-premise and cloud-based solutions can be used for.
- Deploy and migrate desktops to Windows 10.

- Plan and configure Windows Update policies.

Module 3: Managing Updates for Windows 10

This module covers managing updates to Windows. This module introduces the servicing options for Windows 10. Students will learn the different methods for deploying updates and how to configure windows update policies.

Lessons

- Implementing Windows 10 by using dynamic deployment
- Implementing Windows 10 by using Windows Autopilot
- Upgrading devices to Windows 10

Lab : Practice Lab - Managing Updates for Windows 10

- Manually configuring Windows Update settings
- Configuring Windows Update by using GPOs

After completing this module, students will be able to:

- Describe the Windows 10 servicing channels.
- Configure a Windows update policy using Group Policy settings.
- Configure Windows Update for Business to deploy OS updates.
- Use Windows Analytics to assess upgrade readiness and update compliance.

Module 4: Course Conclusion Lessons

- Final Exam

Lab : Graded Lab

After completing this module, students will be able to:

- Create a provisioning package.
- Configure an Autopilot deployment.
- Describe the tools used for planning upgrades and migrations.
- Describe the methods used to migrate user data.

MD-101T02-A: Managing Modern Desktops and Devices

Module 1: Device Enrollment

In this module, students will examine the benefits and prerequisites for co-management and learn

how to plan for it. This module will also cover Azure AD join and will be introduced to Microsoft Intune, as well as learn how to configure policies for enrolling devices. The module will conclude with an overview of device inventory in Intune and reporting using the Intune console, Power BI and Microsoft Graph.

Lessons

- Device management options
- Manage Intune device enrollment and inventory

Lab : Practice Lab - Device Enrollment and Management

- Installing the MDM Migration Analysis Tool (MMAT)
- Obtain Intune and Azure AD Premium licenses and enable device management
- Enrolling devices in Intune
- Managing devices in Intune
- Creating device inventory reports

After completing this module, students will be able to:

- Describe benefits and methods for migrating to co-management.
- Deploy an MDM with Microsoft Intune.
- Configure device enrollment.
- Enroll desktop and mobile devices in Windows Intune.
- Configure and download inventory reports.

Module 2: Configuring Profiles

This module dives deeper into Intune device profiles including the types of device profiles and the difference between built-in and custom profiles. The student will learn about assigning profiles to Azure AD groups and monitoring devices and profiles in Intune. The module will conclude with an overview of using Windows Analytics for health and compliance reporting.

Lessons

- Configuring device profiles
- Managing user profiles
- Monitoring devices

Lab : Practice Lab - Managing profiles

- Configuring roaming user profiles and Folder Redirection
- Create and deploy device profile based on the scenario
- Change deployed policy and monitor user and device activity

- Configuring Enterprise State Roaming

After completing this module, students will be able to:

- Describe the types of device profiles.
- Create and assign device profiles.
- Configure user profile and folder redirection.
- Monitor and report on devices using Intune and Windows Analytics.

Module 3: Application Management

In this module, students learn about application management on-premise and cloud-based solutions. This module will cover how to manage Office 365 ProPlus deployments in Intune as well as how to manage apps on non-enrolled devices. The module will conclude with an overview of Enterprise Mode with Internet Explorer and Microsoft Edge and tracking your installed applications, licenses, and assigned apps using Intune.

Lessons

- Implement Mobile Application Management (MAM)
- Deploying and updating applications
- Administering applications

Lab : Practice Lab - Managing Applications

- Deploying apps by using Intune
- Configure and deploy Office 365 ProPlus from Intune
- Configure mobile application management (MAM) policies in Intune

After completing this module, students will be able to:

- Describe the methods for application management.
- Deploy applications using Intune and Group Policy.
- Configure Microsoft Store for Business.
- Deploy Office365 ProPlus using Intune.
- Manage and report application inventory and licenses.
- Configure Internet Explorer Enterprise Mode.

Module 4: Course Conclusion Lessons

- Final Exam

Lab : Graded Lab

After completing this module, students will be able to:

- Describe the types of device profiles.
- Create and assign device profiles.
- Configure user profile and folder redirection.
- Monitor and report on devices using Intune and Windows Analytics.

MD-101T03-A: Protecting Modern Desktops and Devices

Module 1: Managing Authentication in Azure AD

In this module, students will be introduced to the concept of directory in the cloud with Azure AD. Students will learn the similarities and differences between Azure AD and Active Directory DS and how to synchronize between the two. Students will explore identity management in Azure AD and learn about identity protection using Windows Hello for Business, as well as Azure AD Identity Protection and multi-factor authentication. The module will conclude with securely accessing corporate resources and introduce concepts such as Always On VPN and remote connectivity in Windows 10.

Lessons

- Azure AD Overview
- Managing identities in Azure AD
- Protecting identities in Azure AD
- Managing device authentication
- Enabling corporate access

Lab : Practice Lab - Managing objects and authentication in Azure AD

- Enabling and configuring Azure AD Premium with Enterprise Mobility + Security (EMS) tenant
- Creating user and group objects with UI and Windows PowerShell
- Configuring Self-service password reset (SSPR) for user accounts in Azure AD
- Joining a device to Azure AD

After completing this module, students will be able to:

- Describe the capabilities of Azure AD.
- Manage users using Azure AD with Active Directory DS.
- Implement Windows Hello for Business.
- Join devices to Azure AD.
- Describe methods of enabling access from external networks.

Module 2: Managing Devices and Device Policies

In this module, students will be introduced to managing device security with Intune. Students will

discover how Intune can use device profiles to manage configuration of devices to protect data on a device. Students will learn how to create and deploy compliance policies and use compliance policies for conditional access. The module concludes with monitoring devices enrolled in Intune.

Lessons

- Microsoft Intune Overview
- Managing devices with Intune
- Implement device compliance policies

Lab : Practice Lab - Managing devices

- Configuring Microsoft Intune for device management
- Configuring compliance policies and device profiles
- Enrolling Windows 10 devices and managing compliance

After completing this module, students will be able to:

- Describe mobile device management with Intune.
- Create and assign device profiles to protect data on devices.
- Deploy compliance and conditional access policies.
- Use Intune to monitor device compliance.

Module 3: Managing Security

In this module, students will learn about data protection. Topics will include Windows & Azure Information Protection, and various encryption technologies supported in Windows 10. This module also covers key capabilities of Windows Defender Advanced Threat Protection and how to implement these capabilities on devices in your organization. The module concludes using Windows Defender and using functionalities such as antivirus, firewall and Credential Guard.

Lessons

- Implement device data protection
- Managing Windows Defender ATP
- Managing Windows Defender in Windows 10

Lab : Practice Lab - Managing Security in Windows 10

- Configuring Encrypting File System (EFS)
- Configuring BitLocker
- Configuring a WIP policy in Intune
- Configuring Windows Defender

After completing this module, students will be able to:

- Describe the methods protecting device data.
- Describe the capabilities and benefits of Windows ATP
- Deploy and manage settings for Windows Defender clients.

Module 4: Course ConclusionLessons

- Final Exam

Lab : Graded Lab
