

Setting Up WordPress

Modality: Self-Paced Learning

Duration: 1 Hour

About this course:

There's a great deal of a single tick install out there, but each developer of WordPress has to realize how to install WordPress without any preparation for the occasions when those a single tick installers unsuccessful. With this course, we will learn about the ways that are required to install WordPress on your PC locally (incredible for quick testing!) and through a customs domain on the web host.

The normal pay of a WordPress Developer is \$71,758 annually.

Course Objective:

- Students have an understanding of how to install WordPress on your system.
- Students have an understanding of how to install WordPress on a remote web server on a custom domain.

Audience:

- Website specialists who need to test their structures on WordPress.
- Beginner engineers of WordPress expecting to install it locally for the purpose of testing.
- Aspiring web designers needing to figure out how to set up WordPress from start.

Prerequisite:

- Students need basic internet access and computer knowledge.
- Setting up WordPress on your PC with no cost, but if anyone needs a website then he has to pay for a web host.
