

Understanding the Modern Messaging Infrastructure (MS-200.1)

Modality: On Demand

Duration: 15 Hours

This course is only for the preparation of the MS 200 Exam, which is consequently followed by the MS-200 certification. An official exam voucher is not inclusive of the course although you can purchase it separately.

About this course:

This course is all about learning the infrastructure of modern messaging with the help of Exchange Server and Exchange online. You will further learn how messages can be deployed in various scenarios and organizations. It also involved a step-by-step guide regarding the messaging management tools and how the deployment process works in its early stages. In the end, you will learn about the organizational settings of the messaging infrastructure which entails the management of the authentication procedure for the messaging environment, configuration of quotas for users in the organization and how to go about organization sharing with the federation.

An average Enterprise Messaging Systems Administrator earns up to **\$87,750** per year.

Course aims:

Upon the completion of the course a student will have:

- Knowledge about the Modern Messaging Architecture
- Understanding about the deployment and management of Modern Messaging Architecture
- The ability to manage or create Exchange Recipients
- A clear idea regarding handling of Lists, Resources and Email Addresses
- A plan for how to manage Mailbox Databases
- Knowledge about the authentication regarding messaging
- Understanding of the configuration of Organizational settings
- Understanding of the configuration of Organizational Sharing

Targeted Audience:

Anybody who wants to be the Microsoft 365 Messaging Administrator.

Prerequisite:

Since the role of a Messaging Administer is the configuration, deployment, management and troubleshooting of recipients, permission, the protection of mail and handling the flow of mail or public folders in an environment which can be on premises or cloud based. All of this requires knowledge of authentication types, licensing, and integration with Microsoft 365 applications.

Course Outline:
