Red Hat Enterprise Linux Diagnostics and Troubleshooting (RH342VT)

About this course:

This course aims to provide the students with the necessary skills to have a scientific approach when tackling the structured form of troubleshooting. By learning this method, the student will be able to then troubleshoot an array of problems that come in the way. The issues can include boot problems, hardware problems, storage problems, RPM problems, network problems, third-party application problems, security matters and kernel problems. These are the various problems, which, after taking this course, students will be at the advantage of tackling them adequately. Towards the end of the course, students will get to give practical demonstrations in the labs, for the skills learned throughout the course.

On average, a Red Hat Software Engineer earns \$87,078 per annum.

Learning Objectives:

The course has the following learning objectives:
