

Certified Agile SCRUM Master (Coming Soon)

Modality: Self-Paced Learning

Duration: No

SUBSCRIPTION: Learn, Master, Master Plus

About this course:

The EXIN Agile Scrum Master certification seeks to confirm both the knowledge and skills of the Scrum methodologies as well as Agile framework.

The average salary of an Agile Scrum certified professional is \$90,000 per year

Course Objective:

The course paves the way for the Agile Scrum Master certification. Within this course, delegates get opportunities for exam preparation, and use the extensive practice question database. It is a hands-on workshop-based course, in which there is a requirement of assessment and delivery on practical assignments during courses. The topics in this course include:

- Scrum Master role
- Agile estimates, monitoring, planning, and control
- Adopting Agile
- Agile planning, estimates, control and monitoring
- Preparation for examination
- Managing complex projects

Audience:

The Agile Scrum Master certification suits candidates working in the following professional areas:

- Business Management
- IT Service Management
- Software Development
- Project Management

Professionals working within a project management environment with responsibilities such as working within a project team or conducting project-related functions across organizations.

The list above is a suggestion, and individuals can attend the classes based on their career aspirations. The delegates can take as many or few intermediate qualifications as they need.

Prerequisite:

There are no prerequisites for the Scrum Master exams themselves; however, candidates are

required to submit marked assignments in between the course in order to achieve the Master certification.

The Master portion of the course can be delivered alongside the assignments (for the certification), or without them, in order for the course to be taught with a purely knowledge-centric focus.
