

Planning and Administering Microsoft Azure for SAP Workloads (AZ-120T00)

Modality: Virtual Classroom

Duration: 4 Days

If you enroll in this course at the listed price, you receive a **Free Official Exam Voucher** for the AZ-120 Exam. This course does not include Exam Voucher if enrolled within the Master Subscription, however, you can request to purchase the Official Exam Voucher separately.

About this Course:

This course teaches IT Professionals experienced in SAP solutions how to leverage Azure resources that include deployment and configuration of virtual machines, virtual networks, storage accounts, and Azure AD that includes implementing and managing hybrid identities. Students of this course will learn through concepts, scenarios, procedures, and hands-on labs how to best plan and implement migration and operation of an SAP solution on Azure. You will receive guidance on subscriptions, create and scale virtual machines, implement storage solutions, configure virtual networking, back up and share data, connect Azure and on-premises sites, manage network traffic, implement Azure Active Directory, secure identities, and monitor your solution.

Course Objectives:

After completing this course, students will be able to:

- Migrate and SAP HANA, S/4HANA, SAP NetWeaver to Azure
- Leverage Azure Portal, Cloud Shell, Azure PowerShell, CLI, and Resource Manager
- Use intersite connectivity features including VNet Peering and VNet-to-VNet connections
- Work with Azure Active Directory (AAD) and Azure AD Connect

Audience:

This course is for Azure Administrators who migrate and manage SAP solutions on Azure. Azure Administrators manage the cloud services that span storage, networking, and compute cloud capabilities, with a deep understanding of each service across the full IT lifecycle. They take end-user requests for new cloud applications and make recommendations on services to use for optimal performance and scale, as well as provision, size, monitor and adjust as appropriate. This role requires communicating and coordinating with vendors. Azure Administrators use the Azure Portal and as they become more proficient they use PowerShell and the Command Line Interface.

Prerequisites:

- Administrators and architects of Azure solutions for SAP should possess solid knowledge of SAP Applications, SAP HANA, S/4HANA, SAP NetWeaver, SAP BW, OS Servers for SAP Applications and Databases.
- Prior to taking this course, it is recommended that students to have taken the Azure Administrator (AZ-103) or Azure Solutions Architect (AZ-300) training, as well as SAP HANA and Linux training.

Course Outline:

Module 1: Explore Azure for SAP workloads

Contains Lessons covering Azure on SAP workloads, SAP and Azure common terms and meanings, SAP-certified configurations, and architectures for both SAP NetWeaver with AnyDB and SAP S/4 HANA on Azure virtual machines.

Module 2: Explore the foundations of Infrastructure as a Service (IaaS)

Contains lessons on Azure compute, Azure storage, Azure networking, and databases in Azure.

Module 3: Explore the foundations of identity and governance

Contains lessons on identity services, Azure remote management, and Azure governance and manageability.

Lab : Implementing Linux clustering on Azure VMs

Lab : Implementing Windows clustering on Azure VMs

Module 4: Deploy SAP on Azure

Contains lessons on deployment of single-instance implementations (2-tier and 3-tier), and implementation of high availability in SAP NetWeaver with AnyDB on Azure virtual machines.

Lab : Implement SAP architecture on Azure VMs running Windows

Lab : Implement SAP architecture on Azure VMs running Linux

Module 5: Ensure business continuity and implement disaster recovery for SAP solutions on Azure

Contains lessons on implementation of high availability for SAP workloads in Azure, disaster recovery for SAP workloads in Azure, and backups and restores.

Module 6: Migrate SAP workloads to Azure

Contains lessons on use of the SAP workload planning and deployment checklist, migration options - including database migration option (DMO) methodology and cloud migration options; and how to migrate very large databases (VLDB) to Azure.

Module 7: Monitor and troubleshoot Azure for SAP workloads

Contains lessons on monitoring requirements of Azure for SAP workloads, configuration of Azure Enhanced Monitoring Extension for SAP, and Azure virtual machine licensing, pricing, and support.

Module 8: Explore SAP HANA on Azure (Large Instances)

Contains lessons on Explore the foundations of SAP HANA on Azure (Large Instances), SAP HANA on Azure (Large Instances) certified offerings, SAP HANA on Azure (Large Instances) sample architecture, SAP HANA on Azure (Large Instances) planning considerations, SAP HANA on Azure (Large Instances) high availability and disaster recovery, "backup, security, licensing, and support" considerations for SAP HANA on Azure (Large Instances), implementation and deployment of SAP HANA on Azure (Large Instances), management of SAP HANA on Azure (Large Instances), monitor and troubleshoot SAP HANA on Azure (Large Instances), implementation of business continuity, disaster recovery, and backup.
