

Project Management Skills for Non-Project Managers

Modality: On Demand

Duration: 2.5 Hours

About this course:

A project is temporary because it has a specified start and finish in time, and thus specified resources and scope. What's more, a project is one of a kind in that it's anything but a standard activity, but a particular arrangement of tasks intended to achieve a solitary objective. Therefore, a group of a project sometimes incorporates individuals who don't, for the most part, cooperate – once in a while from various associations and across different geographies. Project management, at that point, is the utilization of information, aptitudes, devices, and methods to extend exercises to meet the needs of the project. Students who are not proficient project managers will gain proficiency with the essentials of project management. You will figure out how to join set up established processes of project management into the company, taking advantage of your aptitudes and experience and permitting employers to create the leadership and management abilities from inside. This course helps understudies in the groundwork for the exam of Project Management Professional (PMP)®.

The normal pay for a Project Manager is **\$80,854** annually.
