Course Duration: 4 Hours

CompTIA Cloud+ Intermediate

About this course:

This is CompTIA Cloud+ Intermediate course. The course has been designed to tackle the concepts taught in the CompTIA Cloud+ Basic course part. In this course, students will get to study those concepts in-depth and get adequately trained for the CompTIA Cloud+ CV0-002 exam. The next installation in this three-part course series is the CompTIA Cloud+ Advanced course. In this course, students will be taught in great detail the concepts of analyzing, selecting, monitoring, and protecting cloud resources.

On average, a CompTIA certified earns \$90,579 per annum.

Learning objectives:

The course has the following learning objectives:

- Virtualization in the Cloud
- Resource Allocation
- Optimization

Audience:

The course has been designed for the following groups:

- IT professionals, those who are working with IT vendors and enterprise customers and wish to get training in analyzing, monitoring or securing cloud resources, and those who are working with cloud-systems
- As this is a vendor-agnostic course therefore the course also covers the common technical concepts that are usable for every vendor's cloud infrastructure

Requirements:

It is highly recommended for the students to take the CompTIA Cloud+ Basic and CompTIA Cloud+ Intermediate courses prior to taking this course.

It is important to complete the entire three-part course series in order to cover the CompTIA Cloud+ certification exam syllabus.

This course has advanced-level difficulty as compared to the Basic course.

Suggested pre-taken course:

- CompTIA Cloud+ Basic

Course Outline:

- **Chapter 01 - Virtualization in the Cloud**

- **Chapter 02 - Resource Allocation**
- **Chapter 03 - Optimization**
