

# **Programming C# 6: Advance**

**Modality: On Demand**

**Duration: 8 Hours**

## **About this course:**

The Programming C# 6: Advanced is the third course in the three course series on the programming language C#. This course further builds on the concepts taught in the C# Fundamentals and C# Intermediate courses and covers the technically complex topics such as objects, methods, inheritance, interfaces and arrays.

This programming language course will explore some of the more advanced features of the C# language. Candidates will be able to learn how to systematically program in C# and solve complex real-world programming problems. The course fully prepares the students to work in demanding environments with full confidence and efficiency.

## **Course Objective:**

- Identify how to work with objects
- Learn about properties and methods
- Save and retrieve information in a C# program
- Understand the concept of inheritance, abstract classes and derived classes
- Learn to use interfaces in .NET framework
- Implement partial and nested classes
- Comprehend the concept and usage of arrays

## **Audience:**

- Experienced software developers looking to enhance their knowledge of C# and Microsoft Visual Studio and .NET framework
- Candidates with understanding of Java, C++, Microsoft Visual Basic and Objective-C
- Candidates with strong concept of object-oriented-programming

## **Prerequisite:**

- This advanced level course requires the students to have complete command of C# basics.
- Ideally the students should enroll for C# Fundamentals and C# Intermediate courses before opting to register for this course.
- Additionally, the candidates should also possess a minimum of two years of hands-on programming experience in any programming language preferably C#.

## **Course Outline:**

Here is the course outline for this course:

- Chapter 01 - Working With Objects
- Chapter 02 - Methods
- Chapter 03 - Methods in Classes
- Chapter 04 - Inheritance
- Chapter 05 - Interfaces
- Chapter 06 - Arrays
