Learning Style: Virtual Classroom

Technology: Cisco

Difficulty: Beginner

Course Duration:

Next Course Date: **May 18, 2026**

## Implementing and Administering Cisco Solutions (CCNA v2.1)

The Cisco Certified Network Associate (CCNA) is one of the most recognized entry-level certifications in IT networking, validating your ability to install, configure, operate, and troubleshoot small to medium-sized networks. This CCNA instructor-

led course equips students with essential network administration training, helping them master the fundamentals of IPv4 and IPv6 addressing, routing and switching, wireless networking, and basic security protocols.

Through this CCNA virtual training, you'll participate in live Cisco networking online classes that combine guided lectures, Cisco IOS hands-on lab training, and real-world case studies. Each session is led by certified Cisco instructors who provide step-by-step guidance in configuring routers, switches, and network devices while building your understanding of troubleshooting and network operations. By the end of this Cisco 200-301 live training, you'll be prepared to take the exam with confidence and apply your skills to real-world networking environments.

The CCNA certification is widely respected in the IT industry and often serves as the first step toward advanced Cisco certifications and specialized roles. In the United States, network professionals with a CCNA certification typically earn between \$75,000 and \$92,000 per year, with experienced engineers and administrators earning \$100,000 or more as they advance into senior or cloud networking roles.

## **Course Objectives:**

After taking this course, you should be able to:

- Identify the components of a computer network and explain their basic characteristics
- Describe the features and functions of the Cisco IOS Software
- Explain IPv4 and IPv6 addressing scheme
- Implement basic configurations on a Cisco router
- Identify and resolve common switching and routing networking issues
- Describe network and device architectures and explain virtualization
- Describe the smart network management solutions like Cisco DNA Center, SD-Access and SD-WAN
- Outline threat defense technologies
- And many, many more aspects of a basic IPv4 and IPv6 network

## **Audience:**

- Entry-level network engineer
- Network administrator

- Network support technician
- Help desk technician

## **Prerequisites:**

Before taking this course, you should have:

- Basic computer literacy
- Basic PC operating system navigation skills
- Basic Internet usage skills
- Basic IP address knowledge

## **Course Outline:**

- Section 1: Exploring the Functions of Networking
- Section 2: Introducing the Host-To-Host Communications Model
- Section 3: Operating Cisco IOS Software
- Section 4: Introducing LANs
- Section 5: Exploring the TCP/IP Link Layer
- Section 6: Starting a Switch
- Section 7: Introducing the TCP/IP Internet Layer, IPv4 Addressing, and Subnets
- Section 8: Explaining the TCP/IP Transport Layer and Application Layer
- Section 9: Exploring the Functions of Routing
- Section 10: Configuring a Cisco Router
- Section 11: Exploring the Packet Delivery Process
- Section 12: Troubleshooting a Simple Network
- Section 13: Introducing Basic IPv6
- Section 14: Configuring Static Routing
- Section 15: Implementing VLANs and Trunks
- Section 16: Routing Between VLANs
- Section 17: Introducing OSPF
- Section 18: Building Redundant Switched Topologies
- Section 19: Improving Redundant Switched Topologies with EtherChannel
- Section 20: Exploring Layer 3 Redundancy
- Section 21: Introducing WAN Technologies
- Section 22: Explaining Basics of ACL
- Section 23: Enabling Internet Connectivity
- Section 24: Introducing QoS
- Section 25: Explaining Wireless Fundamentals
- Section 26: Introducing Architectures and Virtualization
- Section 27: Explaining the Evolution of Intelligent Networks
- Section 28: Introducing System Monitoring
- Section 29: Managing Cisco Devices

- Section 30: Examining the Security Threat Landscape
- Section 31: Implementing Threat Defense Technologies
- Section 32: Securing Administrative Access
- Section 33: Implementing Device Hardening

## Labs Outline:

Discovery 1: Get Started with Cisco CLI  
 Discovery 2: Observe How a Switch Operates  
 Discovery 3: Perform Basic Switch Configuration  
 Discovery 4: Inspect TCP/IP Applications  
 Discovery 5: Configure an Interface on a Cisco Router  
 Discovery 6: Configure and Verify Layer 2 Discovery Protocols  
 Discovery 7: Configure Default Gateway  
 Discovery 8: Explore Packet Forwarding  
 Discovery 9: Troubleshoot Switch Media and Port Issues  
 Discovery 10: Troubleshoot Port Duplex Issues  
 Discovery 11: Configure Basic IPv6 Connectivity  
 Discovery 12: Configure and Verify IPv4 Static Routes  
 Discovery 13: Configure IPv6 Static Routes  
 Discovery 14: Configure VLAN and Trunk  
 Discovery 15: Configure a Router on a Stick  
 Discovery 16: Configure and Verify Single-Area OSPF  
 Discovery 17: Configure and Verify EtherChannel  
 Discovery 18: Configure and Verify IPv4 ACLs  
 Discovery 19: Configure a Provider-Assigned IPv4 Address  
 Discovery 20: Configure Static NAT  
 Discovery 21: Configure Dynamic NAT and PAT  
 Discovery 22: Log into the WLC  
 Discovery 23: Monitor the WLC  
 Discovery 24: Configure a Dynamic (VLAN) Interface  
 Discovery 25: Configure a DHCP Scope  
 Discovery 26: Configure a WLAN  
 Discovery 27: Define a RADIUS Server  
 Discovery 28: Explore Management Options  
 Discovery 29: Explore the Cisco DNA Center  
 Discovery 30: Configure and Verify NTP  
 Discovery 31: Create the Cisco IOS Image Backup  
 Discovery 32: Upgrade Cisco IOS Image  
 Discovery 33: Configure WLAN Using WPA2 PSK Using the GUI  
 Discovery 34: Secure Console and Remote Access  
 Discovery 35: Enable and Limit Remote Access Connectivity  
 Discovery 36: Configure and Verify Port Security  
 FASTLab 1: Implement the Initial Switch Configuration  
 FASTLab 2: Implement an Initial Router Configuration  
 FASTLab 3: Implement IPv4 Static Routing  
 FASTLab 4: Implement IPv6 Static Routing  
 FASTLab 5: Troubleshoot VLANs and Trunk  
 FASTLab 6: Implement Multiple VLANs and Basic Routing Between the VLANs

FASTLab 7: Improve Redundant Switched Topologies with EtherChannel  
FASTLab 8: Implement Numbered and Named IPv4 ACLs  
FASTLab 9: Implement PAT  
FASTLab 10: Configure System Message Logging  
FASTLab 11: Secure Device Administrative Access  
FASTLab 12: Implement Device Hardening

## Credly Badge:

### **Display your Completion Badge And Get The Recognition You Deserve.**

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
