Borderless Networks Design and Architecture - On Demand

Modality: On Demand

Duration: 40 Hours

Course Information

About this course:

This e-learning course will help you learn about the design and architecture of Cisco Borderless Networks. Focus will remain on the key topics including data center, mobility, security, energy management, and Cisco Medianet® as well as other strategic Borderless Networks components. Students will be guided through animated modules with self-check questions at the end of each module.

New Borderless Networks capabilities help organizations achieve a superior customer experience, higher workforce productivity, and seamless globalization. They help IT departments to increase productivity while scaling security, network control, and the scope of IT innovation and efficiency.

The latest enhancements to the Cisco® Borderless Network Architecture scale an organization's ability to connect securely to anyone, anywhere, with any device, while delivering a high-quality experience even to the most resource-intensive multimedia applications, and this course will build skills so you can understand and implement it to your business or organization.

Prerequisite:

- There are no prerequisites required for this course
