

Power BI Intermediate

Modality: Self-Paced Learning

Duration: 2 Hours

About this Course:

Power BI is Microsoft's business analytics platform. It's designed from the ground up to take mass sets of data and organize, analyze, and visualize it using live dashboards and interactive reports.

Course Objectives:

- In this series, users will be introduced to the foundational concepts of building queries and prepping data for analysis. Users will learn to build relationships across multiple databases using Power Pivot, all the while learning useful functions to help take data to the next level. Become familiar with building and navigating live dashboards and interactive reports, and much more.

Audience:

- Business Analysts, Data Analysts, and everyone in between looking to take the next step in data processing and visualization.

Course Outline:
