

Website Wireframing with HTML5 and CSS3

Modality: Self-Paced Learning

Duration: 3 Hours

About this Course:

This series of instructional videos will guide you through the process of creating the basic sections of your site, arranging and aligning text and images, and adding interactive features. Once you're finished creating the wireframe, Geoff will show you how to put it online to share with coworkers and clients. After taking this course you'll be able to build attractive and professional website prototypes in about an hour. The best part? Unlike a simple mockup in Photoshop, you can actually turn this wireframe into a fully-functioning website!

Audience:

- Anyone who wants to learn web development
- People who want to create web sites professionally or just for fun!

Course Outline:

This Course Includes:

- Course Introduction
- Getting Started
- Wireframing the Header in Greater Detail
- Building the Rest of the Layout
- Finishing Touches
- Wrapping Up
