

Introduction to Bootstrap

Modality: Self-Paced Learning

Duration: 6 Hours

About this Course:

Bootstrap is a responsive web framework containing layouting, generic styling enhancements, and components to develop mobile first websites and web applications. Bootstrap was originally developed by Twitter. In this course, we will cover Bootstrap 4. Bootstrap gives you a possibility to apply and create themes. Themes enable you to change the look and feel of a website by including a different CSS file. The generic Bootstrap CSS structure helps you change themes seamlessly.

Course Objectives:

- Layout design with Bootstrap
- Page navigation in Bootstrap 4
- Page content components
- Application setup, deployment, and hosting

Audience:

- Front-end developers
- Web developers
- Programmers

Prerequisites:

- Knowing HTML and CSS is required to go through this course.
- JavaScript knowledge is not necessary to benefit from Bootstrap, however, for the full experience, it is worth learning it.

Course Outline:

This Course Includes:

- Introduction to Bootstrap
- Layout Design with Bootstrap
- Page Navigation in Bootstrap 4
- Page Content Components
- Application Setup, Deployment, and Hosting
