

WordPress

Modality: On Demand

Duration: 3 Hours

In this course, you will learn how to use WordPress to post, configure, install and edit a website.

Learn how you can use WordPress to configure, post, edit, and install websites onto a server

About this course:

WordPress has quickly become the most popular content management system across the internet. It allows people to create and manage websites without needing to code. Learning WordPress will allow people to create their own websites and work on setting up WordPress websites for others. This course covers all the tools, skills, and information that is required in setting up and maintaining a WordPress based website. This course covers how to install the WordPress content management system onto a server and then customize it while troubleshooting the problems that may appear. Hands-on exercises are used to provide experience while important knowledge is imparted during lectures.

The average annual income for WordPress Developers is **\$58,000**.
