Learning Style: Virtual Classroom

Technology: Microsoft

Difficulty: Intermediate

Course Duration: 4 Days

## Microsoft Identity and Access Administrator (SC-300T00)

### About this Course:

This course provides IT Identity and Access Professional, along with IT Security Professional, with the knowledge and skills needed to implement identity management solutions based on Microsoft Azure AD, and its connected identity

technologies. This course includes identity content for Azure AD, enterprise application registration, conditional access, identity governance, and other identity tools.

## Course Objectives:

- Implement an identity management solution
- Implement an authentication and access management solutions
- Implement access management for apps
- Plan and implement an identity governancy strategy

## Audience:

- This course is for the Identity and Access Administrators who are planning to take the associated certification exam, or who are performing identity and access administration tasks in their day-to-day job. This course would also be helpful to an administrator or engineer that wants to specialize in providing identity solutions and access management systems for Azure-based solutions; playing an integral role in protecting an organization.

## Prerequisites:

Successful learners will have prior knowledge and understanding of:

- Security best practices and industry security requirements such as defense in depth, least privileged access, shared responsibility, and zero trust model.
- Be familiar with identity concepts such as authentication, authorization, and active directory.
- Have some experience deploying Azure workloads. This course does not cover the basics of Azure administration, instead the course content builds on that knowledge by adding security specific information.
- Some experience with Windows and Linux operating systems and scripting languages is helpful but not required. Course labs may use PowerShell and the CLI.

- 

## Course Outline:

### Module 1: Implement an identity management solution

Learn to create and manage your initial Azure Active Directory (Azure AD) implementation and configure the users, groups, and external identities you will use to run your solution.

### Lessons

- Implement Initial configuration of Azure AD
- Create, configure, and manage identities

- Implement and manage external identities
- Implement and manage hybrid identity

**Lab : Manage user roles**

**Lab : Setting tenant-wide properties**

**Lab : Assign licenses to users**

**Lab : Restore or remove deleted users**

**Lab : Add groups in Azure AD**

**Lab : Change group license assignments**

**Lab : Change user license assignments**

**Lab : Configure external collaboration**

**Lab : Add guest users to the directory**

**Lab : Explore dynamic groups**

After completing this module, students will be able to:

- Deploy an initial Azure AD with custom settings
- Manage both internal and external identities
- Implement a hybrid identity solution

## **Module 2: Implement an authentication and access management solution**

Implement and administer your access management using Azure AD. Use MFA, conditional access, and identity protection to manage your identity solution.

### **Lessons**

- Secure Azure AD user with MFA
- Manage user authentication
- Plan, implement, and administer conditional access
- Manage Azure AD identity protection

**Lab : Enable Azure AD MFA**

**Lab : Configure and deploy self-service password reset (SSPR)**

**Lab : Work with security defaults**

**Lab : Implement conditional access policies, roles, and assignments**

**Lab : Configure authentication session controls**

## **Lab : Manage Azure AD smart lockout values**

## **Lab : Enable sign-in risk policy**

## **Lab : Configure Azure AD MFA authentication registration policy**

After completing this module, students will be able to:

- Configure and manage user authentication including MFA
- Control access to resources using conditional access
- Use Azure AD Identity Protection to protect your organization

## **Module 3: Implement access management for Apps**

Explore how applications can and should be added to your identity and access solution with application registration in Azure AD.

### **Lessons**

- Plan and design the integration of enterprise for SSO
- Implement and monitor the integration of enterprise apps for SSO
- Implement app registration

## **Lab : Implement access management for apps**

## **Lab : Create a custom role to management app registration**

## **Lab : Register an application**

## **Lab : Grant tenant-wide admin consent to an application**

## **Lab : Add app roles to applications and receive tokens**

After completing this module, students will be able to:

- Register a new application to your Azure AD
- Plan and implement SSO for enterprise application
- Monitor and maintain enterprise applications

## **Module 4: Plan and implement an identity governance strategy**

Design and implement identity governance for your identity solution using entitlement, access reviews, privileged access, and monitoring your Azure Active Directory (Azure AD).

### **Lessons**

- Plan and implement entitlement management
- Plan, implement, and manage access reviews
- Plan and implement privileged access

- Monitor and maintain Azure AD

**Lab : Creat and manage a resource catalog with Azure AD entitlement**

**Lab : Add terms of use acceptance report**

**Lab : Manage the lifecycle of external users with Azure AD identity governance**

**Lab : Create access reviews for groups and apps**

**Lab : Configure PIM for Azure AD roles**

**Lab : Assign Azure AD role in PIM**

**Lab : Assign Azure resource roles in PIM**

**Lab : Connect data from Azure AD to Azure Sentinel**

After completing this module, students will be able to:

- Mange and maintain Azure AD from creation to solution
- Use access reviews to maintain your Azure AD
- Grant access to users with entitlement management

## Credly Badge:

### Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
