Learning Style: On Demand

Provider: Microsoft

Difficulty: Intermediate

Course Duration: 5 Hours

Essential Math for Machine learning: Python Edition

About this course:

Want to study machine learning or artificial intelligence, but worried that your math skills may not be up to it? Do words like “algebra” and “calculus” fill you with dread? Has it been so long since you studied math at school that you’ve forgotten much of what you learned in the first place?

You're not alone. machine learning and AI are built on mathematical principles like Calculus, Linear Algebra, Probability, Statistics, and Optimization; and many would-be AI practitioners find this daunting. This course is not designed to make you a mathematician. Rather, it aims to help you learn some essential foundational concepts and the notation used to express them. The course provides a hands-on approach to working with data and applying the techniques you've learned.

This course is not a full math curriculum; it's not designed to replace school or college math education. Instead, it focuses on the key mathematical concepts that you'll encounter in studies of machine learning. It is designed to fill the gaps for students who missed these key concepts as part of their formal education, or who need to refresh their memories after a long break from studying math.

Course Objectives:

- Equations, Functions, and Graphs
- Differentiation and Optimization
- Vectors and Matrices
- Statistics and Probability

Audience:

- Data Analyst
- Programmers

Prerequisite:

- A basic knowledge of math
- Some programming experience – Python is preferred.
- A willingness to learn through self-paced study.

Course Outline:

This Course Includes:

- Course Introduction
- Logistic Regression
- Exercises
- Clustering
- Decision Trees
- Neural Networks
- Deep Neural Networks and Backpropagation

Credly Badge:

Display your Completion Badge And Get The Recognition You Deserve.

Add a completion and readiness badge to your LinkedIn profile, Facebook page, or Twitter account to validate your professional and technical expertise. With badges issued and validated by Credly, you can:

- Let anyone verify your completion and achievement by clicking on the badge
- Display your hard work and validate your expertise
- Display each badge's details about specific skills you developed.

Badges are issued by QuickStart and verified through Credly.
